HandPump Boreholes

Access to clean and safe drinking water remains a fundamental necessity and a key driver of public health, economic productivity, and social well-being. In recognition of this essential need, concerted efforts have been made to enhance water supply across the constituency through the provision of hand pump boreholes and solar-powered boreholes.

These interventions are aimed at addressing water scarcity, reducing the hardship faced by residents—especially women and children—in accessing potable water, and improving overall health and sanitation standards. The projects are strategically distributed to ensure equity, sustainability, and maximum community impact across wards and local government areas of Balanga Billiri federal constituency.

Billiri Local Government Area

1. Tal Ward – Posulte
